Hi all,

Great to meet you all today – I hope our session was useful in demonstrating some of the ways we're building on our user experience within the LMS.

Following up on some of the questions raised:

Editing Labels for the LMS Homepage:

You can edit all user-facing labels in **References à Manage Labels à Labels**

The default labels on the homepage to edit are below. You can search for this specific Label ID to find and edit them (note: you will see all of the default localisations within, so there may be multiple languages to update):

label.RequiredAssignments (Required/Compliance Learning)

label.ImportantLearning (Important Learning)

label.InvestSectionTitle (Invest in Myself)

label.LatestBookmarks (Bookmarks)

label.PersonalizedRecommendations (Personalized Recommendations)

Character Limit for Labels and Custom Cards

SAP SuccessFactors Learning labels have a limit of 10,000 bytes. The limit is in bytes, not in characters, because some UTF-8 characters are more than one byte.

For custom cards, the titles have a limit of 50 characters and descriptions have a limit of 160

In addition, it is worth noting the limits of active custom cards:

You can create up to 100 custom cards. People can see up to 8 cards, based on the current date, status of the card, and their organization or user group. By default, custom cards display in the **Custom Cards** section, below the **Requests for Me** section on the new Learning home page (this can be changed in "**Edit Custom Section à Section Placement**" within the card's configuration).
